## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 07/28/2005 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Chin (U.S. 5,591,183).

Note in figures 7 and 8, wherein Chin teaches the method steps as claimed by providing a long slender rod (700) with a handle (704) on a proximal end and a distal end, wherein the distal end having a first sideways hook (708) and second sideways hook (710) extending from the rod (700) in an opposing direction from

the first sideways hook (708); manipulating the rod so as to slide the sideways (708,710) around the artery; and pushing and/or pulling the rod (700) to slide the hooks (708,710) along the artery until the artery is separated from the surrounding tissue (see figs. 8A-8C and col. 8, lines 1-28).
